

DGN-32 and N-32 Roof Deck

The Ultimate Combination of Strength & Efficiency

DO MORE WITH LESS USING N-32 Roof Deck by ASC Steel Deck

N-32 offers the lowest installed cost with the highest level of performance for a 3" deep structural roof deck profile.

features | benefits

DGN-32 & N-32 provides designers equivalent section properties and diaphragm shear values to the traditional DGN-24 & N-24 profile.

- Gives designers a one-to-one substitution from N-24 to N-32.

N-32 roof deck has been fully evaluated for use with the revolutionary DeltaGrip™ attachment system.

- The DeltaGrip™ System provides an even more economical 3" roof deck installation.

DGN-32 & N-32 coverage is 8" inches wider than the industry standard 24" wide N roof deck, offering a variety of cost-saving benefits:

- 25% fewer deck sheets to spread.
- 25% fewer side lap attachments per square foot.
- 5% fewer attachments to supports.
- Lowest installed cost available in the market.

DGN-32 & N-32 roof deck has a natural trapezoidal shape and an inherent shadow rib.

- Avoids the "box" look of many common N roof deck products.
- Offers an aesthetically pleasing appearance suitable for many architectural exposed roof deck applications.
- DGN-32 & N-32's trapezoidal shape keeps the "nested" roof deck from wedging in bundles, giving contractors better ease of separation and easier placement of deck for safer jobsite conditions.

DGN-32 & N-32 roof deck is available in several profile options:

- Nestable configuration for screwable sidelaps
- Acoustical
- DGNF-32 & NFN-32 Cellular
- DGNF-32 & NFN-32 Cellular Acoustical
